Abstract
Since the introduction of monolingual learners' dictionaries, about six decades ago, 1986-2006 was the period in the history of lexicography that saw the greatest number of new developments in this field. Some of the areas in which changes took place are the semi-bilingualization of learners' dictionaries, the incorporation of user-friendly features in learners' dictionaries, the creation of word corpora on which learners' dictionaries can be based, the development of software programs for dictionary writing and manipulation, the invention of electronic applications of lexicography data bases, the emergence of a highly competitive market for publishers of learners' dictionaries, the flowering of academic lexicography, such as university departments and courses, research in, and writing about the theory and practice of pedagogic lexicography, and last but not least, the multiplicity of neologisms. Is it conceivable that new developments will continue to evolve at such a breathtaking speed? What will dictionaries be like ten more Euralex conferences from now, in 2026?

1 Introduction

A period of twenty years is a very short time in the history of lexicography. Indeed, it is only a fraction of a lexicographer's lifetime. Yet, the metamorphosis of dictionary design, production and use in this past score of years is unparalleled in all dictionary history. I discuss eight areas in which profound changes have taken place. The selection is purely subjective, and additional areas may be suggested by participants in the discussion period.

2 The semi-bilingualization of learners' dictionaries

The semi-bilingualization of learners' dictionaries – which is providing a separate mother-tongue translation of the headword, for each meaning of every entry and sub-entry – could never have come about if the monolingual learner's dictionary had not first been invented. During the preceding four decades the groundwork had already been laid in developing monolingual learners' dictionaries, with their easy-to-understand defining vocabularies, examples of typical use, and learning notes, by pioneers such as A.S. Hornby and publishers such as Longman and Oxford. [See OALD1 and LDOCE1.] These dictionaries, of course, were monolingual, and so relied on the users' ability to understand everything they read, even though they were foreign language dictionaries.

From there, it was a short jump to satisfy language learners' psychological and practical needs for a translation into the language they are actually thinking in, while learning a new

language and using a dictionary. Previously, Panmun Book Company, Ltd. of Korea had tried translating almost the entire text of Oxford Advanced Dictionary of Current English into Korean [See OALD English-Korean edition]. But 'over-translating' turned out to be self-defeating, because then users tend to read only the translation, without reading the text in the target language, and so, they do not think in the target language. Nevertheless, it was a step away from the Direct Method in foreign language teaching (total immersion in the target language) and a return to the recognition of the importance of the use of the mother-tongue.

Semi-bilingualization, the first serious attempt of which appeared in 1986, heralded a new phase in the concept of language-learning dictionaries [See OSDHS1, 1986].

3 The incorporation of user-friendly features in learners' dictionaries

An integral aspect of semi-bilingual dictionaries for language learners is their learner-friendly features, which make dictionaries easier to use. Look at this page from AOLD3, whose contents are no more user-friendly than its appearance. Notice how crowded it is – how jam-packed with abbreviations, signs and symbols. This dictionary uses over 75 abbreviations, signs and symbols, and has 40 pages explaining how to use it, including 10 pages of tables of verb patterns. Such a volume must have turned off most users. Moreover, since each dictionary had its own system (as is still the case), even if you managed to learn the system of one dictionary, you would still not be able to use another.

Compare this page with any modern dictionary. [See OALD7, and MED.] Modern-day dictionaries are designed to have text that is less crowded and more legible. Selected items are highlighted by color, font or positioning. The text is not over-crowded, making it easier to find the desired entries and the appropriate meanings. The pages are attractively planned and are visually appealing. The contents are clear, comprehensible, and considerate of the language level of the user. Some of these contemporary dictionaries not only provide information, but explain it in such a way that they may be considered language teaching tools.

Unfortunately, in an attempt to out-do one another, there is a tendency in some of the present editions to provide an over-abundance of information about usage – more than is necessary for learning purposes.

4 The creation of word corpora on which learners' dictionaries can be based

The development of computers and computer programs made it possible for steps to be taken in many languages to create data bases in which the uses in that particular language of words, phrases and expressions are analyzed and categorized for frequency, meaning, collocation, etc. Some of these were developed by publishers for their own particular needs, sometimes in conjunction with a university, such as Oxford Corpus Collection, and Longman Corpus Network, and some are available publicly, such as Bank of English, and British National Corpus. New dictionaries have been written which, instead of being based solely on human experience, derive confirmation from computer-ordered frequency lists and actual citations from current texts.

But, as often occurs when embracing new ideas too enthusiastically, the pendulum made a complete sweep, partly disregarding human experience and knowledge, as well as peda-

gogic considerations. Now the pendulum is slowly creeping back towards the middle, more ready to accept active human intervention in the use of corpora. At the same time, attempts are being made to compile learners' corpora, which, hopefully, will be better suited for use in compiling learners' dictionaries, as they will emphasize more the particular language that the learner encounters and requires.

5 The development of software programs for dictionary writing and manipulation

Dictionaries are no longer written on slips of paper, but right onto computers, and directly into software programs designed to accept, store and process the information so that it can subsequently be used in a multiplicity of ways. We can discuss this point further in the discussion period.

6 The invention of electronic applications of lexicography data bases

Paper dictionaries are being challenged by electronic dictionaries in half a dozen electronic forms: hand-held battery-operated devices, computer software containing dictionary data bases, Internet-based (on-line) dictionaries, dictionaries on CD ROMs, and soon in cell phones. The competition from electronic sources is so intense that some printed dictionaries can also be found in one or more electronic forms, such as a CD ROM, neatly tucked away in the inside pocket of the back cover, (as with OALD7, for example), or providing on-line access to the printed material.

7 The emergence of a highly competitive market for publishers of learners' dictionaries

Whereas two decades ago there was only a small number of serious publishers who enjoyed the monolingual learners' dictionary market, competitors have appeared – serious contenders – creating a highly competitive market, and bringing with them all the advantages and disadvantages of competition. Today there are five major large-size learners' dictionaries. They are commonly referred to as "the big five": Oxford, Longman, Macmillan, Cambridge and Cobuild). My company is now working on a sixth. In addition, there is a large number of medium-size and smaller dictionaries, many of which are derived from "the big five".

8 The flowering of university departments and courses, research and writing about the theory and practice of pedagogic lexicography

The past two decades have seen many universities setting up departments, courses, seminars or workshops for lexicography in general and pedagogic lexicography in particular. A large number of doctoral theses have been written on lexicography and related topics. And an unprecedented number of research projects have been undertaken. National and international conferences have taken place, books, conference proceedings and articles have been published, and dictionary societies, associations and other groups have come into existence. These developments have contributed substantially to the expansion of lexicography as a profession.

In addition to national and local organizations for lexicographers and their fellow travelers, there are dictionary societies that encompass whole continents: Euralex, Asialex, Afrilex, Australex, and DSNA. We are only waiting now for Globalex – the global dictionary organization that will encompass all dictionary organizations.

Special mention should be made of the great giants of lexicography, who have spanned this period. I refrain from mentioning names, as most are still alive, and many are still active. But without their contributions lexicography would not be where it is today.

9 The multiplicity of neologisms

By neologisms I mean not only new words, but new meanings acquired by already existing words. The past two decades have seen the adoption of more neologisms than any other period.

Each new edition of every dictionary is a replica-in-language-form of the society whose language it documents. Actually, the documentation of words and their uses is the most accurate reflection of a society that it is possible to attain. No other form of writing can achieve such a close-to-perfect image of any sector of a society (no less society in its totality) than a dictionary can – neither fiction, history books nor even encyclopedias. No other form of human creativity – whether poetry, music, art, photography, theater or dance – no activity, whether mechanical, technological or electronic – can delve into every nook and cranny of humankind, as does a dictionary's representation of a language's words and their uses. People do not think of dictionaries as history books, but that is exactly what they are. Each new word or meaning describes a change in society. Likewise, each word or meaning that drops out of use, reflects its own particular societal change.

Dictionaries are mankind's most effective means of recording social change. By entering into the minutest variance of the subtleties of individual words, phrases, collocations, fluctuations in grammatical use and syntax, dictionaries record society at the time they are last edited. And the differences between two editions of any given dictionary record the changes in society in the period between the two editions. Words come into the dictionary, and their meanings are changed; other words drop out.

This transformation has taken place in these past two decades more than at any other equivalent period of time in the entire history of dictionaries.

10 What does the future have in store?

Competition will bring forth new ideas (assuming there are ideas that have not yet been thought of and tried out). And the market will re-shape itself in order to accommodate other dictionaries. Regarding the 'threat' of electronics to paper dictionaries, it seems that paper dictionaries will continue to hold out for a long time to come.

worm/worry

living in the ground, or the kinds living as parasites in the intestines, etc of animals 벌레, (특히) 땅 속에 사는 지렁이 (따위) (~worm~)와 기생충 (따위), ⇨ hook (1) (~worm), tape (~worm). '~cast n tubular pile of earth pushed up by an earth~ on the ground 지렁이 똥, *the ~ of consciences*, remorse 양심의 가책.

2 used as a name for larvae, insects, etc (유충, 곤충 같은 이름으로서서) [복합어]: 'silk~ 누에; 'glow~ 개똥벌레의 애충. '~eaten *adj* full of ~ holes; antiquated 벌레 먹은; (따위) 낡은, 오래된, '~hole n hole left in wood, fruit, etc by ~s (나무, 과실 따위에) 벌레 구멍.

3 insignificant or contemptible person [무가] 인색 같은 인간. *Even a ~ will turn*, There are limits to patience. 《속담》 지렁이도 밟으면 꿈틀한다.

4 spiral part of a screw 나사의 나선 부분, 螺. '~gear n arrangement in which a wheel with teeth gears with the ~ (4) of a revolving spiral 웜 톱니 바퀴(장치).

□ *vt 1* [VP15A,B] ~ *oneself/one's way in/into/through*, move slowly, or by patience, or with difficulty 서서히 [끈질기게] 나아가, 어렵게 움직이다(나아가다); *He ~ed himself/ his way through the undergrowth*, 덤불 속을 간신히 뚫고나아갔다. *He ~ed himself into favour/into her confidence*, 그는 이럭저럭해서 호감/그녀의 신용을 얻어냈다. ~ *sth out (of sb)*, extract (by persistent questioning, etc) (끈질긴 질문 따위로) 알아내다: *He ~ed the secret out of me*, 저에게서 비밀을 알아냈다. *2* [VP6A] rid of parasitic ~s 기생충을 없애다: *I think one'd better ~ the cat*, eg by giving it a powder or pill, 저 고양이에게서 기생충을 없앤 편이좋겠다. ~*y adj* having many ~s; damaged by ~s; like a ~ 벌레가 많은; 벌레 먹은; 벌레 같은.

worm-wood /'wɜːmwʊd/ *n* [U] kinds of perennial plant with a bitter flavour, used in the preparation of vermouth and absinthe and in medicine; bitter mortification 쑥속; [비유] 심한 고통 苦痛; 쓰라림.

worn /wɔːn/ *pp* of *wear*. 마모하다.

worri-some /'wʌrɪsəm/ *adj* troublesome; worrying 성가신, 귀찮은; 걱정되는.

worry /'wʌrɪ/ *vt,vi* (*pt,pp* ~*ied*) *1* [VP6A, 14,16A,17,22] trouble; give (sb, oneself) no peace of mind; cause anxiety or discomfort to 걱정하다, 괴로와하다; 괴롭히다; 애를 태우다, 애먹이다: ~ *sb with foolish questions* 어리석은 질문으로 귀찮게 하다; ~ *oneself sick/ be worried sick about sth*, be extremely anxious about it 몹시 걱정하다. *The noise of the traffic worried her*, 시끄러운 차 소리가 그녀를 괴롭혔다. *What's ~ing you?* 무슨 걱정이냐. *Her child has a bad cough and it rather worries her*, 애가 기침이 심하여 그녀는 다소 걱정을 하고 있다. *I have a bad tooth that is ~ing me*, 충치가 있어서 근심되다.

87 **ghastly/girder**

(Note: compare *birthday* and *Christmas presents*.) ◊ *horse¹* (1). מַתָּנָה שַׁי

2 [C] natural ability or talent: *have a gift for art/languages*. פִּשְׁרוֹן שֶׁל

3 [U] right or power to give: *The property came to me by free gift*, was given to me. מַתָּן זְכוּת לָתֵת □ *vt give*, eg land, as a gift. הֶעֱנִיק בְּמַתָּנָה 'gift-voucher, document to be exchanged for gifts. תְּלוּשׁ שַׁי

gifted *adj* talented. מוּכְשָׁר מְחוֹנָן

gig¹ *n* [C] 1 small, light two-wheeled carriage pulled by one horse. כִּרְכָּרָה
2 ship's small boat. סִירָה

gig² *n* [C] (*informal*) booking for musicians (especially jazz) to perform. הוֹפָעַת נִגּוּן

gi-gan-tic *adj* of immense size. עֲנָקִי

giggle *vi* laugh in a nervous and silly way. צִחֲקֵק □ *n* [C] laugh of this kind. צִחְקוּק

gild *vt* (*pp* usually gilded, but ◊ gilt below) cover with gold leaf or gold-coloured paint: *gild a picture-frame*. הִזְהִיב
gilder, person who gilds (picture-frames, etc). מַזְהִיב

gild-ing *n* [U] material with which things are gilded. חֹמֶר לְהַזְהָבָה

gild ◊ guild.

gill¹ *n* [C] (*usually pl*) organ with which a fish breathes. זִים

gill² *n* [C] liquid measure, one-quarter of a pint. גִּיל

gilt *n* [U] = gilding.

gim-let *n* [C] small tool for boring holes in wood, etc. מַקְדֵּחַ

gim-mick *n* [C] (especially of actors, advertisers) trick, catchword, article of clothing, etc used to attract attention, customers, etc. תַּחְבּוּלָה

gin¹ *n* [U] colourless alcoholic drink. גִּ'ין

gin-ger *n* [U] 1 (plant with a) hot-tasting root used in cooking and for making a kind of wine. זַנְגָּבִיל
2 liveliness; energy: *a ginger group*, (in Parliament) group of MP's that urges the Government to be more active. מֶרֶץ
3 (used as an adjective) light reddish-yellow colour: *ginger hair*. אֲדַמְדַּם □ *vt make more vigorous or lively: ginger up the supporters*. הִמְרִיץ 'ginger 'ale/beer, non-alcoholic drink flavoured with ginger. מַשְׁקֶה זַנְגְּבִילִי

gin-ger-ly *adv* with great care to avoid harming oneself, what one touches, making a noise, etc. בַּזְּהִירוּת □ *adj* cautious; careful: *move in a gingerly fashion*. זָהִיר

ging-ham *n* [U] printed cotton or linen cloth, with stripes or checks. אֲרִיג כֻּתְנָה מְעֻטָּר

gipsy, gypsy *n* [C] (*pl* gipsies) member of a wandering Asiatic race, now living in many parts of Europe. צוֹעֲנִי

gi-raffe *n* [C] African animal with a very long neck and legs. גִּ'ירָפָה

girder *n* [C] 1 wood, iron or steel beam to support the joists of a floor. קוֹרָה
2 structure of steel forming the span of a bridge, etc. מִבְנֶה קוֹרוֹת מַתֶּכֶת
